

PosterJet media and printer update via Media DVD

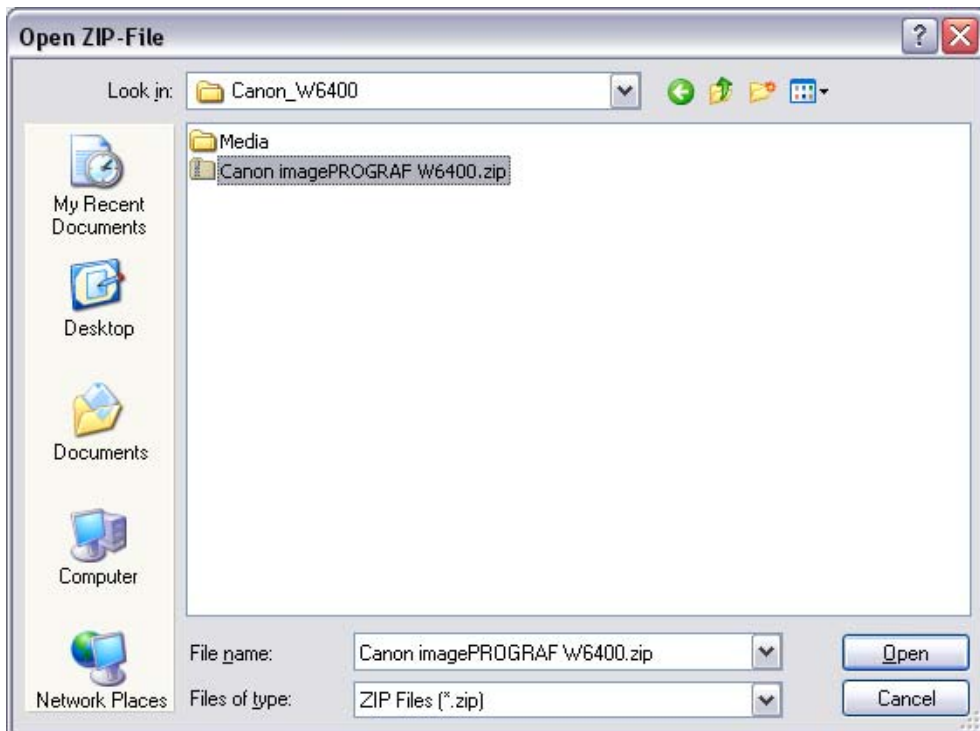

Next to update media profiles from the internet PosterJet provides also an update from a file (local hard disk, DVD or CD). To install a new media profile or printer plugin from the media DVD start the Media and printer update from the "Tools" menu. Then choose the "Update From File" option.

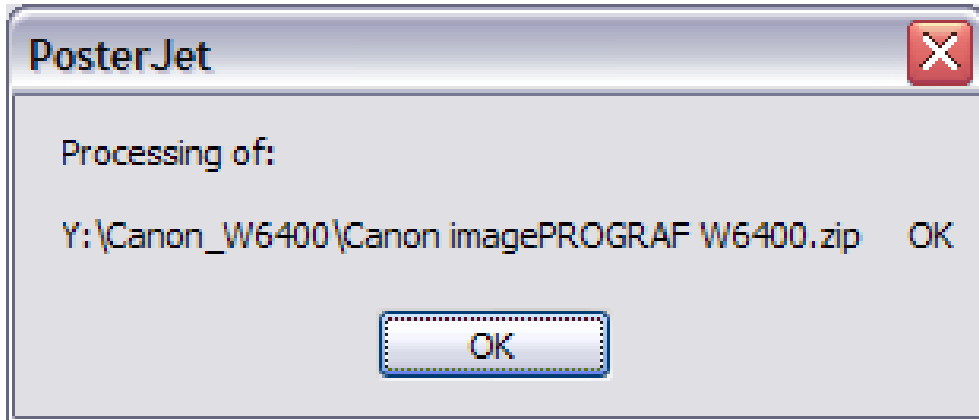

To select the desired update-files, click on the button "Browse...". The file browser will appear and will allow you to search for printer and media files.

Using this file browser you can search the inserted PosterJet Media DVD for the desired files for updating. All updates are provided as ZIP-packages. They are automatically unpacked and installed by PosterJet once you have selected the file and confirmed with "Open". All updates provided by Eisfeld Datentechnik have a sensible name and are located in a folder with the respective name (e.g. printer updates are usually located in a folder with the printer name).

In the file browser you may select single or multiple files. Once you have selected the desired files, load them by clicking on the "Open" button. The selected files will be unpacked and installed automatically. The following message is closed by clicking on the "OK" button. Now you will return to the PosterJet Web Update window. You can finish the update procedure by closing the Web Updater with the "Close" button.
